5. Regional Connectors Study: Modeling Update Congestion-Related Findings: Craig Eddy/ Consultant Team, MBI

During the August 13th Working Group Electronic Meeting, the Consultant Team provided a comprehensive update of the RCS Phase 2 and Phase 3 tasks. The main part of the presentation focused on results from the land use and travel demand model runs to determine whether adequate differentiation has been achieved among different growth scenarios. The travel demand model runs showed results with and without technology for the 2045 baseline and greater growth scenarios.

Following an extended discussion regarding the results and reported selected performance measures, the Working Group members concurred and agreed that there was sufficient differentiation between the three growth scenarios and directed the Consultant Team to move the study forward to the next steps.

Mr. Craig Eddy, RCS Project Manager and the Consultant Team will provide a presentation of some key dashboard features (congestion and performance).
